1 Abstract

2 Introduction

3 Optimal Control and Lyapunov Stability Theory

3.1 Discrete-Time Dynamical Systems and Stability

3.1.1 Lyapunov Stability

3.1.2 Asymptotic Stability

3.2 Model Predictive Control and Stability

3.2.1 Problem Formulation

3.2.2 Terminal Set and Terminal Cost Constraints

3.3 Stability without Terminal Constraints

4 Foundations of Neural Control Policies

4.1 Artificial Neural Networks

4.1.1 Multi-Layer Perceptrons

4.1.2 Optimization and Training

4.2 Counterexample-Guided Inductive Synthesis

5 Formal Verification of Neural Control Policies

5.1 Mixed-Integer Linear Programming

5.2 Branch and Bound

5.3 $\alpha\beta$ -CROWN

6 Learning Lyapunov-Stable Imitation Controllers

6.1 Neural Policy Approximation and Imitation Learning

6.1.1 Data Generation and MPC Expert

6.1.2 Policy Network Architecture and Imitation Objective

6.2 Lyapunov Learning for Stability Certification

6.2.1 Lyapunov Network Architecture

6.2.2 Loss Formulation and CEGIS Training

6.3 Formal Verification Methodology

7 Experimental Evaluation and Certification Results

7.1 System Modeling and Problem Formulation

7.1.1 Double Integrator

7.1.2 Cartpole

7.2 Linear System: Double Integrator

7.3 Nonlinear System: Cartpole

8 Discussion

8.1 Qualitative Discussion of Results

8.2 Challenges with Nonlinear Dynamics

8.3 Scalability and Limitations

9 Conclusion

A Appendix
